

The successful implementation of pro-human principles in efficient social actions.

A reminder : Eco-Humanism (eco=house) is an existential philosophy of the common House of Humanity, which for more than 26 centuries values human development by contributing to make the organization of the human whole as cohesive, reactive, and protective as possible.

According to its principles, and by necessity of human adaptive self-correction,

COHESION - ADAPTATION - RESILIENCE

are essential qualities of any human societal organization,

SOLIDARITY - EQUALITY - JUSTICE

are essential qualities in any human social organization,

DIGNITY - COURAGE - IMPROVEMENT

are essential qualities of every human Being (particularly eco-humanist),

BEING - DUTY - KNOWLEDGE

are the main qualifying criteria that strengthen the human self-correction.

This last trinomial implies helping and valuing those who cultivate themselves, who know how to be, and who accomplish their duty, as best as possible, at the service and in the legitimate interest of the human whole. And this leads, by complementary reaction, to fight all those who abuse of unlimited having, hoarded power, and falsified appearances, against the legitimate and public interest of the human whole, as well as everything that divides and opposes human communities and beings in the name of such or such ideology.

Because the legitimate interest of the human whole implies by plain natural right a promotion of that is beneficial to it, and a protection against all that is harmful to it.

That is why, in the 21st century, while predatory pluto-imperialists maliciously abuse of having, power, and appearances, against the legitimate and public human interest, reconstructing eco-humanists successfully promote being, duty, and knowledge, in defense of this legitimate general interest, while courageously opposing, by all means, against plutocracy, predation, imperialism, and anti-human behaviors.
